

# Outrigger Fabric Structures for Shopping Centres and Retail

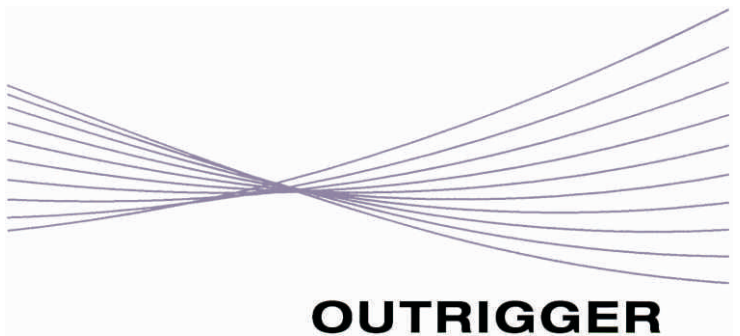

Outrigger Awnings is an Australian Company, and all awnings are designed, engineered, and manufactured in Australia using the best available fabrics and materials

## Details

An Outrigger fabric structure may be the ideal solution for your outdoor area. We custom design and manufacture retracting awnings, permanent rainproof awnings and sails, clear side screens, and demountable shade sails.

An Outrigger fabric structure can be made to almost any shape, size, and colour, and we generally offer full design, engineering, fabrication, and installation services.

# Retracting Awnings

An Outrigger retracting awning is a custom designed retracting roof system that gives you the choice of having a completely open outdoor space, or when the weather changes, a rain and sun protected outdoor area.

An Outrigger retracting awning is a robust and reliable alternative that offers the choice of manual or automated operation. All Outrigger retracting awnings can be left out in high winds and heavy rain, and all installations are designed, engineered, and manufactured in our factory in Sydney, Australia.

Outriggers retracting mechanism is a unique design we custom fabricate for each installation. Having our own mechanism enables us to manufacture retracting awnings to almost any size up to 10 metres wide by 10 metres long, and to a large selection of rectangular and irregular shapes.

## Permanent Rainproof Awnings and Sails

An Outrigger rainproof awning is a custom designed fabric roof system that gives you the feel of an outdoor room while providing rain, wind, and sun protection.

An Outrigger rainproof awning is a stylish alternative that can be made to almost any shape, size, and colour. All awning and sail installations are designed, engineered, and manufactured in our factory.

One of our most popular designs is our patented batten awning which incorporates curved, straight, or pitched battens concealed inside fabric pockets. These battens stiffen and shape the fabric allowing complex 3 dimensional awnings to be made.

An Outrigger rainproof awning can be designed as a single large structure, or alternatively as a series of overlapping sails. We specialise in small to medium sized commercial structures up to 1000 square metres.

## Awnings and Sails continued

## Side Screens

An Outrigger side screen is a roller mounted screen which is either motorised or manually operated via a winch or crank. An Outrigger side screen is exceptionally robust and can be left out in high winds and heavy rain. It is the only screen available with a wind rating of 100 km/h.

Side screens can be made from uv stabilised clear pvc, or a woven pvc mesh shade fabric. A clear pvc screen will offer protection from wind and rain. A shade screen will offer sun protection and a degree of wind and rain protection.

Side screens are available in both standard and custom sizes up to 10 metres wide by 6 metres long for a single screen.

# Recent Projects

Some of our recent projects include;

Tea Gardens Hotel, Bondi  
Rouse Hill Town Centre  
Macarthur Square Shoppingtown, Campbelltown
